# **Slimline Pen Instructions**

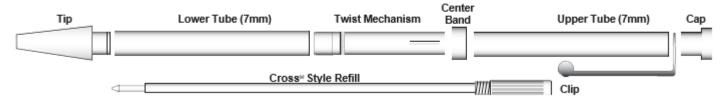

## **Kit Features**

- Affordable
- · Easy to turn and assemble
- A variety of different accessory clips and center bands are available
- Turn straight "bushing to bushing" or with whatever artistic flair you choose
- Uses smooth-writing Cross<sup>™</sup> style refill (See Below)
- WG50002: Cross Style Refills Black 5pk
- WG50003: Cross Style Refills Blue 5pk

## **Required Accessories & Materials**

- 7mm mandrel
- 3-pc. Slimline bushing set (WG60024)
- 7mm drill bit (WS00070 Or WS50700)
- 7mm barrel trimmer or belt sander to square the ends of the blanks to the tubes (<u>WS9100-243</u> Paired with <u>W9078</u>)
- Glue (We recommend the thick CA glue—PA00030)
- · Sanding and finishing supplies

## Diagram A - Pen Parts and Assembly

#### BLANK PREPARATION

Both tubes in a Slimline kit are 2-1/32" long. Cut your blanks approximately 1/16" longer than the tube to allow for squaring with the barrel trimmer. If using wood blanks, mark the blanks so it is easier to keep the grain running in the same direction when you place them on the mandrel for turning. Use a medium drill speed to drill the blanks. Raise the bit from the blank every 1/4" to 1/2" to allow the chips to clear from the flutes of the drill bit. Don't force the drill bit, use an even pressure and let the bit do the work. After drilling the blanks, sand the exterior of the brass tubes to roughen their surface and use CA glue to glue the tubes inside the blanks. Sand or barrel trim to square the ends of the blanks.

### TURNING THE PEN AND PENCIL

Set up the mandrel as shown in Diagram C. In a Slimline pen and pencil, all the bushings are the same size. Turn the blanks down to the bushings, then sand with abrasives and finish with your choice of polish.

#### Diagram B - 7mm Bushings

### **ASSEMBLY**

(Line up finished parts according to Diagram A)

To avoid damage to components when assembling, use a pen press or a vise with covered laws.

- 1. Press the tip into the end of the lower pen barrel.
- 2. Press the twist mechanism into the opposite end of the lower barrel. Note: The line on the mechanism is only a guide. Pressing it too far may cause your pen not to fully retract. Press the mechanism in just short of the line, then screw the refill in, and check it. Take the refill out, press a little more, and check it again. Repeat this until the fit is perfect. A stop can also be made to the proper length that will stop you once you are at the proper depth.
- Insert the refill through the upper end of the twist mechanism and screw it in.
- Place the center band over the exposed end of the twist mechanism.
- Insert the cap through the hole in the clip and press the cap into the top end of the upper barrel.
- Slide the top end of the pen over the exposed end of the twist mechanism.
